

Addon

*FAKE CURTAINS FOR
SCANIA NEXT GEN, ETS2.*

oq37

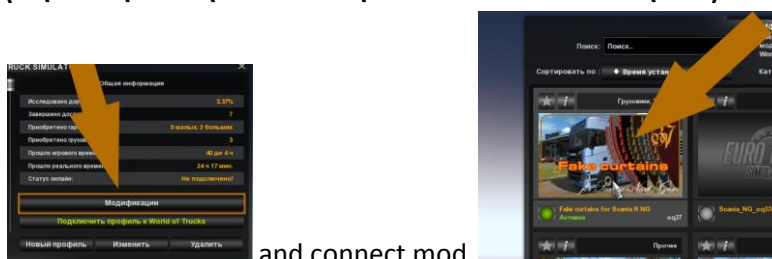

1. Description.

Good afternoon, dear community simulator ETS2. My name is Davydov Oleg, or oq37, whatever you like.

Want to offer a small addition to DLC "Cabin Accessories" that extends the range of curtains that are already in the game. The curtains are available, I added animated fake curtains on the side windows. Since the additional curtains are a complement to the existing ones, the textures and colors are made in accordance with the original. Why the fake curtains, and not real curtains? Because to install these curtains you need to interfere with the model of the truck. This is not a problem, but then the curtains will fit only one mods, while fake curtains suitable to all the already existing modifications of the model. I think this option is more acceptable to the community. In the future I will probably make my version of this truck and in it already do everything that I deem necessary, including curtains.

2. Installation.

Archive **Fake_curtain_oq37_ScaniaNG** put it in the folder with your mod
(C:\Users\Name\Documents\Euro Truck Simulator 2\mod) start the game. Go to manage mod

and connect mod.

Further all is simple - on the service, or the shop will buy the curtains that you like. Curtains from the supplement are indicated by an additional symbol "+" in the title and changed the picture.

Select, install and go. Have a good trip!

Sincerely, Oleg Davydov (oq37).
